

VARIABLE RATE IRRIGATION

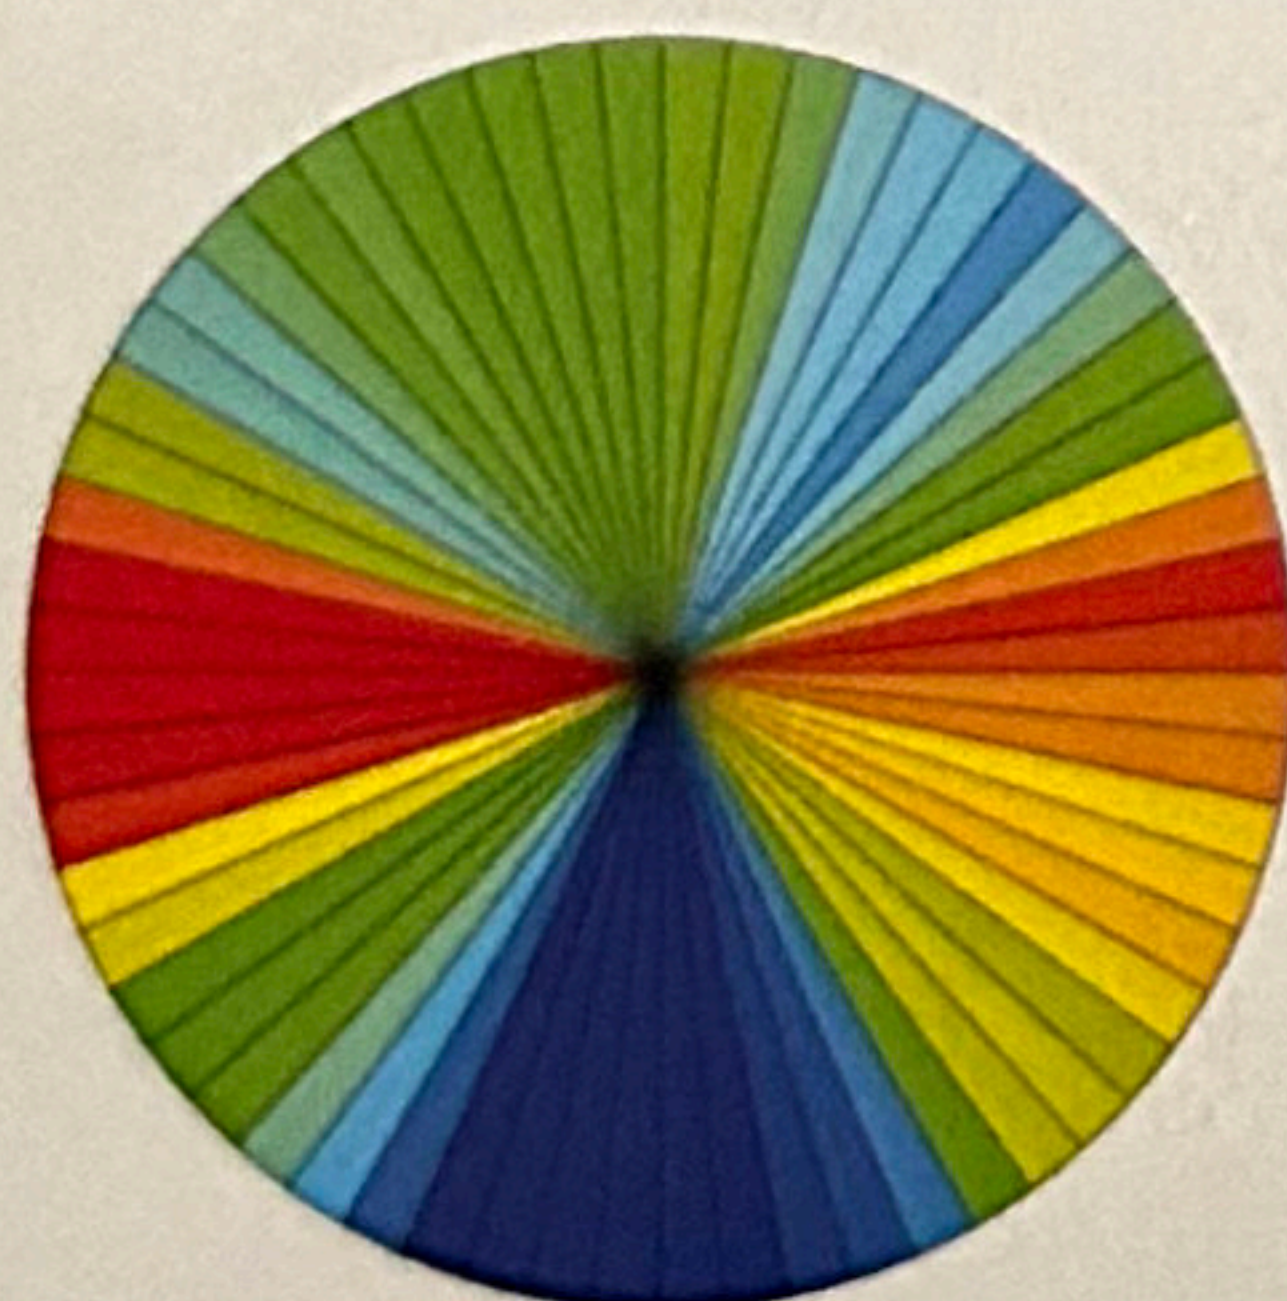

MAXIMIZE EVERY PLANT'S POTENTIAL

- ▲ Reinke VRI technology allows you to customize your water application for your entire field
- ▲ Create multiple prescriptions based on changing terrain, soil type, yield data, and other unique field conditions
- ▲ Reduce over watering and under watering by applying water only where you need it
- ▲ Conserve water resources while also maximizing yields
- ▲ Achieve desired application by varying the system speed (Sector VRI) or by turning sprinklers on and off (Zone VRI)

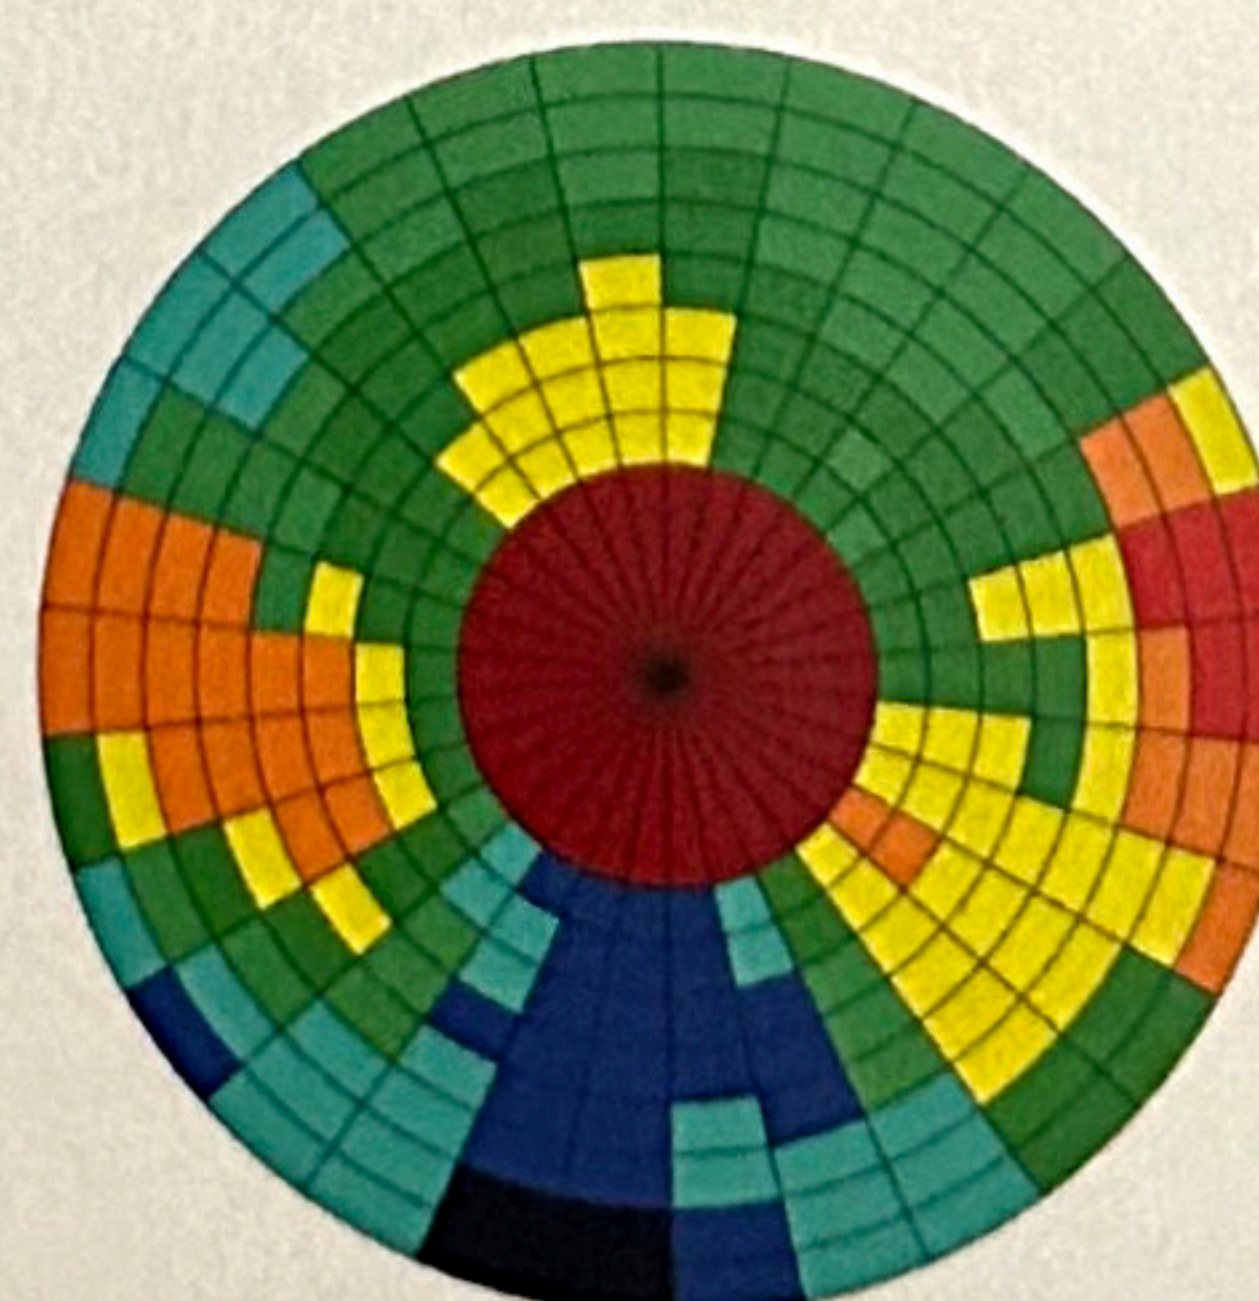

VRI OPTIONS

Sector VRI

Each unique irrigation depth is accomplished by segmenting the coverage area into pie like sectors, speeding the system up over wetter areas and slowing down in dry areas.

Zone VRI

An even higher level of precision is achieved by dividing the coverage area into sectors and rings, turning individually controlled sprinkler zones on and off in areas that require more or less water.

SAC VRI

- ▲ Patent pending technology provides precision irrigation throughout the swing arm corner for excellent coverage and uniformity
- ▲ Benefit by using VRI on the parent system, SAC or both
- ▲ Includes a predictive prescription that can be optimized easily
- ▲ Available with the RPM Preferred Touch or AnnexPF™ panel
